

2025 Water Management Indicators

We recognize that water is an indispensable resource for ecosystems and society. The uncertainties brought by climate change and the growing risk of water scarcity make sustainable water management more critical than ever. Our facilities are located in regions that are not subject to water stress, and our production processes are not water-intensive. Accordingly, our approach focuses on monitoring and improving water use within our offices. The metrics presented below serve as key data for regularly evaluating our water performance, identifying potential risks at an early stage, and continuously enhancing our management strategies;

- Total water withdrawal in cubic meters: 12.030 m³
- Water consumption per capita: 37,13 m³/person
- Blue water footprint: 121.404,37 m³/year
- Total fresh water withdrawal in cubic meters: 0 m³
- Amount of water recycled or reused in cubic meters: 0 m³
- Total volume of water discharged in cubic meters: 0 m³
- Total weight of water pollutant emissions in tonnes: 0 m³
- Direct and accidental oil and other hydrocarbon spills: 0 m³
- Environmental fines as reported by the company: No environmental fines

	Water Withdrawal (m3)	Water Discharge (m3)
Gebze	8.154	0
Düzce	3.298	0
Headquarter	578	0
TOTAL	12.030	0

Table: Water Usage at Site Level
